

ASA 250w

Internal profiling

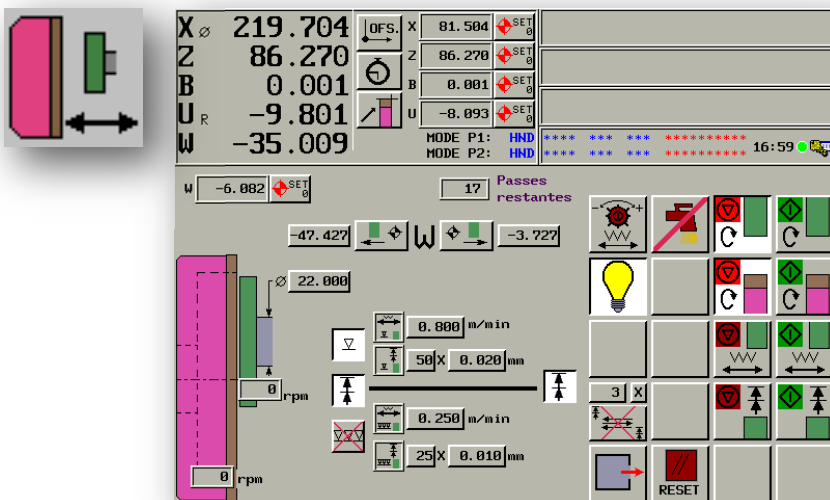

NEW OPTION

This option has been specially designed to profile the inner diameter of certain cup wheels.

Internal diameters from 55mm to 250mm can be profiled.

For example, 11V5R cup wheels for Walter machines or 11A2B cup wheels for Ewag machines (Ewamatic linear).

ADVANTAGES:

Assembly and disassembly of the internal spindle within 3 minutes.

Allows you to profile the inner diameter of your cup wheels directly on the wheels pack to eliminate any run-out on the grinding contact point.
